

Ania's Coffee Cart

One month of a small business, told as a comic.
And one question about profit and cash.

One month later...

I made a profit of

PROFIT

2,075 zł

but there is this much in my bank account:

CASH IN THE BANK

10,200 zł

How can both be true?

Let's follow the money.

Play along

1 **Something happens**
A loan, a machine, a sale…

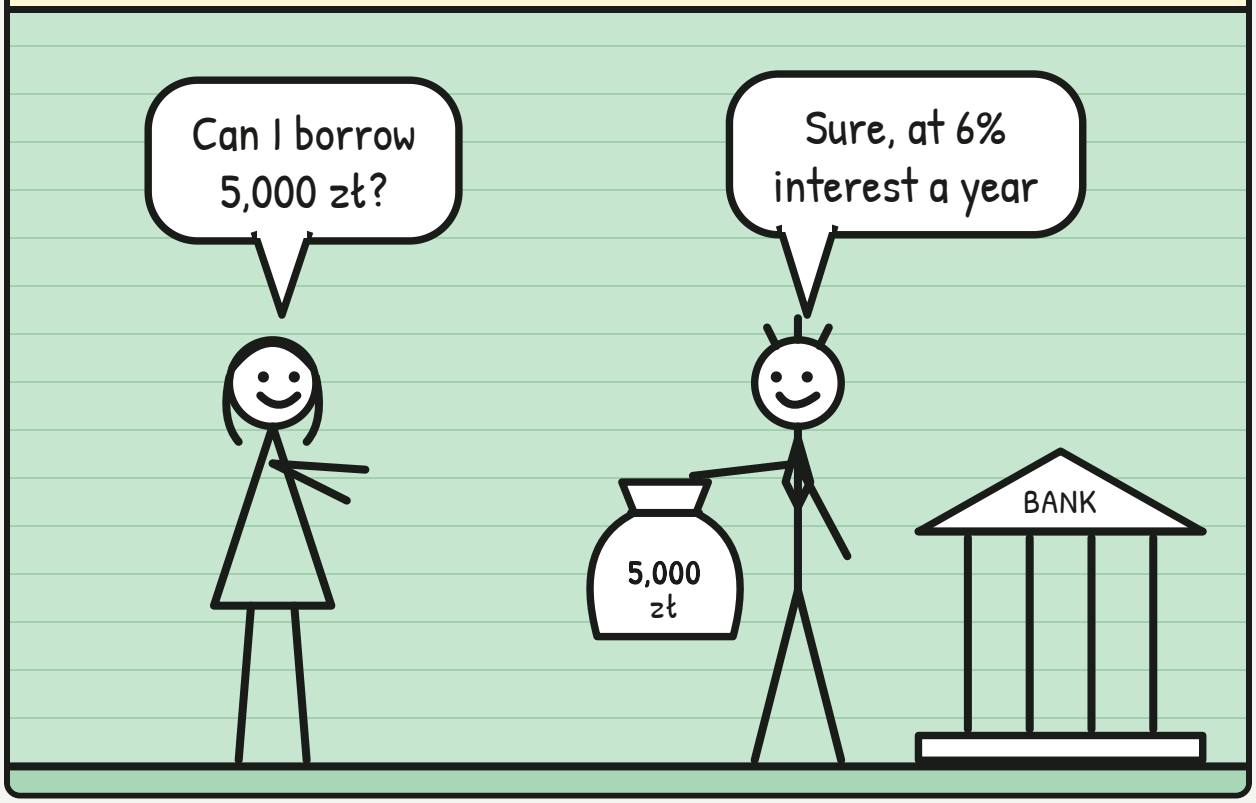

2 **You guess**
Does it change cash, profit, both or neither?

3 **See the answer**
On the next page, with what the accountant writes down.

Tiny bit of jargon: **Dr** = debit = left side, **Cr** = credit = right side. Not money in and out.

Borrowing from the bank

Day 2. Ania borrows 5,000 zł from the bank at 6% a year.

Guess: what changes?

- Cash
- Profit
- Both
- Neither

Borrowing from the bank

Cash only

CASH

+5,000 zł

PROFIT

no change

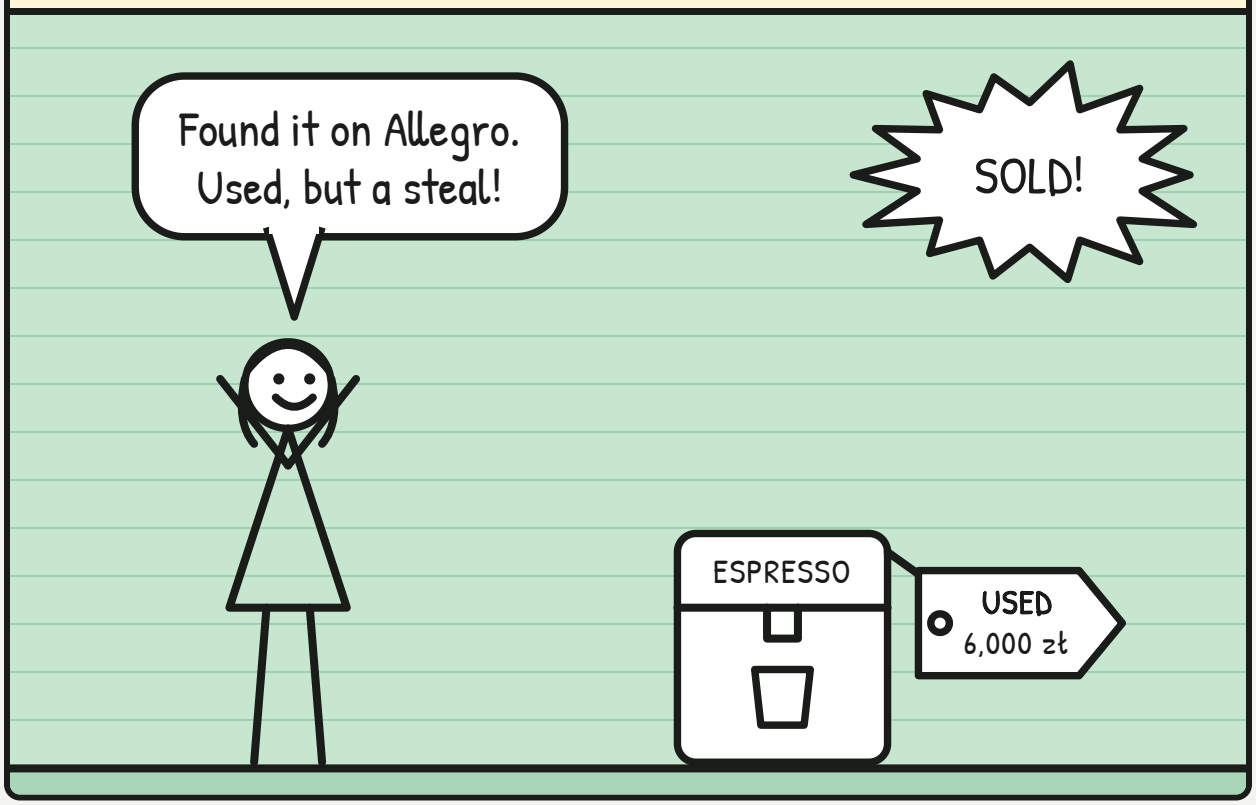

WHAT THE ACCOUNTANT WRITES

Dr Cash	5,000
Cr Bank loan	5,000

A loan isn't income. The money must be paid back, so it's a liability.

Buying the espresso machine

Day 3. She buys a used espresso machine for 6,000 zł.

Guess: what changes?

Cash | Profit | Both | Neither

Buying the espresso machine

Cash only

CASH

−6,000 zł

PROFIT

no change

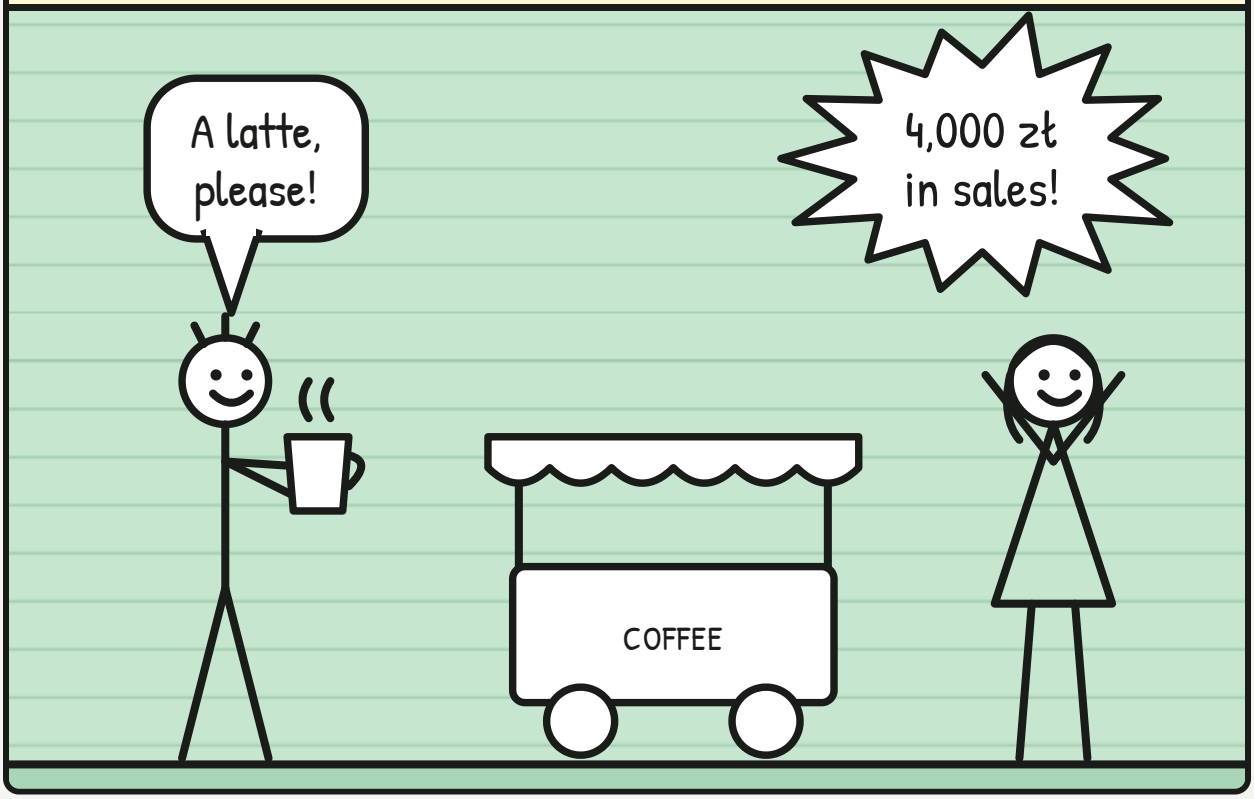

WHAT THE ACCOUNTANT WRITES

Dr Equipment	6,000
Cr Cash	6,000

The machine is an asset, not an expense. Buying it is an investing cash flow. Its cost turns into expense slowly, as depreciation.

Selling coffee for cash

All month. She sells 4,000 zł of coffee. Those drinks use 1,200 zł of beans.

Guess: what changes?

Cash | Profit | Both | Neither

Selling coffee for cash

Both

CASH
+4,000 zł

PROFIT
+2,800 zł

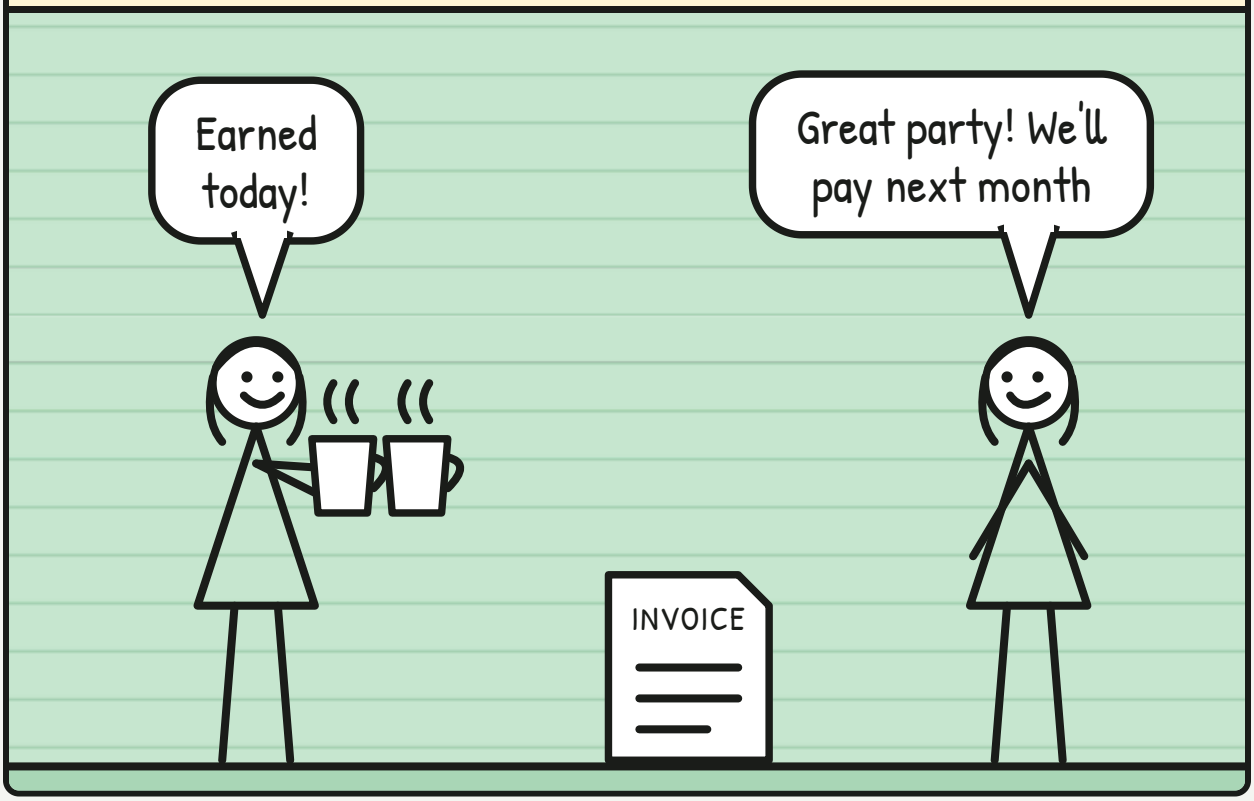

WHAT THE ACCOUNTANT WRITES

Dr Cash	4,000
Cr Revenue	4,000
Dr Cost of sales	1,200
Cr Inventory	1,200

Sales are revenue, and the beans used are the cost. Profit: 4,000 − 1,200 = 2,800 zł.

Catering an office party on credit

Day 20. She caters an office party for 1,000 zł, paid in December. It uses 300 zł of beans.

Guess: what changes?

Cash | Profit | Both | Neither

Catering an office party on credit

Profit only

CASH	PROFIT
no change	+700 zł

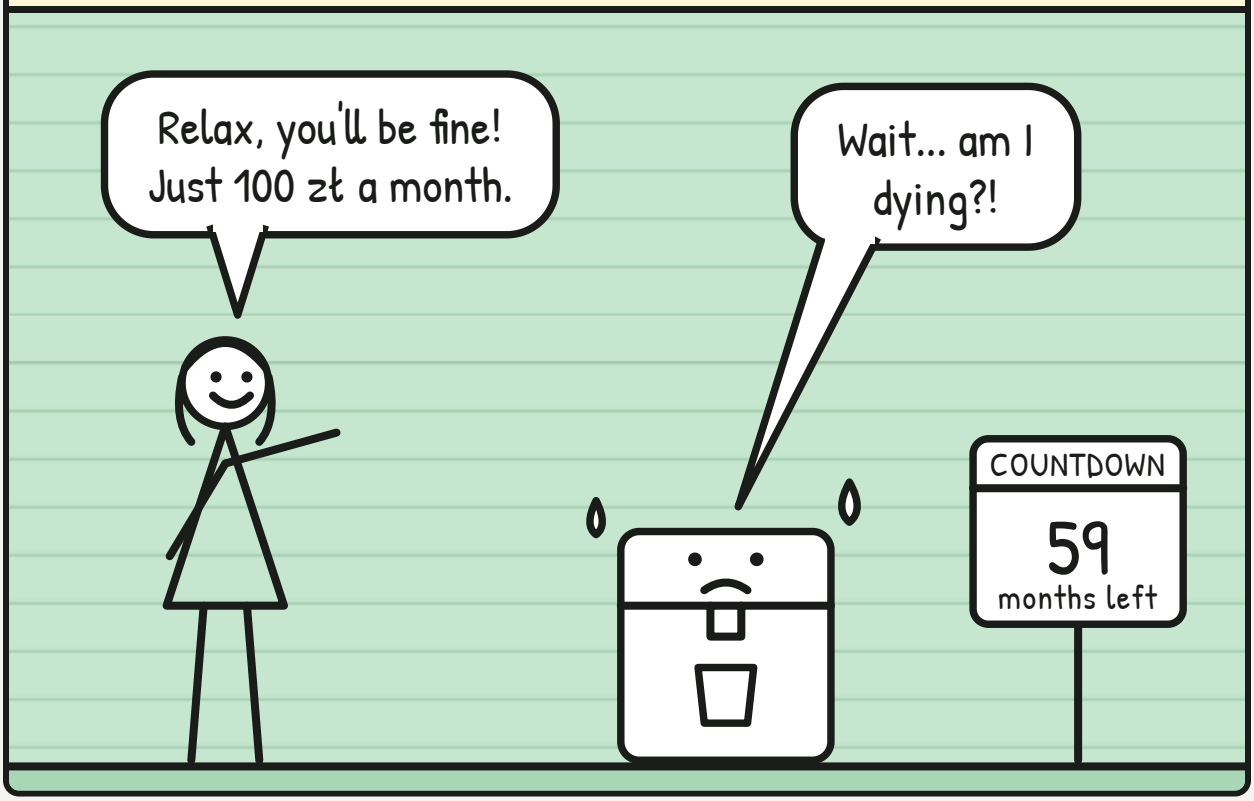

WHAT THE ACCOUNTANT WRITES

Dr	Trade receivables	1,000
Cr	Revenue	1,000
Dr	Cost of sales	300
Cr	Inventory	300

Revenue counts when the work is done, not when the cash arrives. The cash comes in December.

The machine wears out a little

30 November. The machine should last 5 years. One month of it is used up.

Guess: what changes?

Cash | Profit | Both | Neither

The machine wears out a little

Profit only

CASH	PROFIT
no change	−100 zł

WHAT THE ACCOUNTANT WRITES

Dr	Depreciation expense	100
Cr	Accumulated depreciation	100

The 6,000 zł cost is spread over 60 months: 100 zł a month. It's an expense, but no cash moves.

From profit to cash

Profit	**2,075**
+ Depreciation (no cash)	+100
– Beans still on the shelf	−500
– Rent paid ahead	−1,000
+ Bills not paid yet	+525
= Cash from running the cart	**1,200**
– Espresso machine	−6,000
+ Ania's savings + bank loan	+15,000
= Cash in the bank	**10,200**

All amounts in zł, for November.

Three numbers, all true

PROFIT

2,075 zł

What the cart **earned**.

CASH FROM RUNNING THE CART

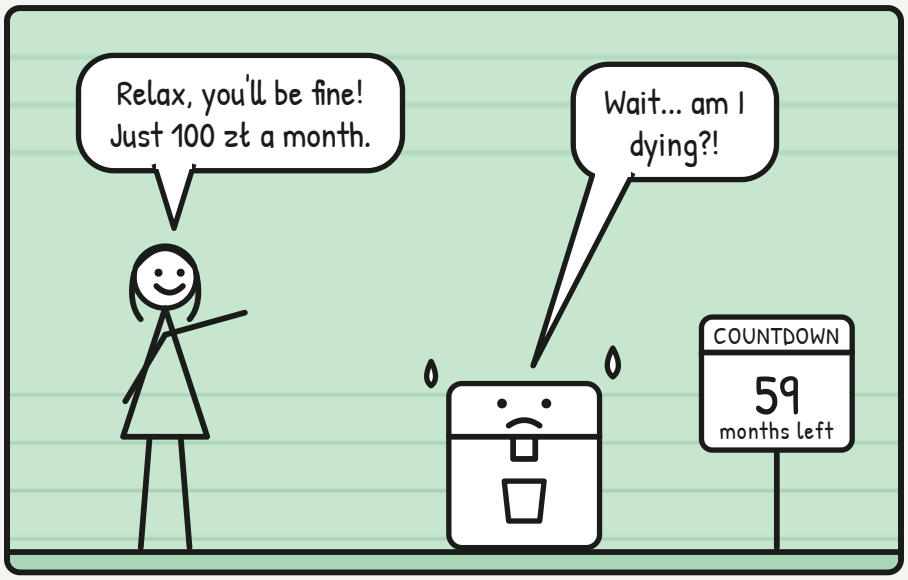

1,200 zł

What selling coffee actually **brought in**.

CASH IN THE BANK

10,200 zł

What Ania **has**, including the loan.

Link in the comments.

I'd love to hear if it was useful, or just fun. :)

Simplified educational example. VAT and income tax are excluded. Actual accounting requirements depend on the business structure and reporting framework.
